“The VectorMark Workstation 150 is an economical entry-level machine that can produce high-quality labels,” explains Bernhard Joos from the TRUMPF marking laser sales team. He recommends the new machine primarily to small-scale businesses.

With the VectorMark Workstation 150, TRUMPF introduces its smallest and most compact laser workstation to the market. It is capable of labeling quickly and easily at the highest quality. Weighing only 60 kg, this light workstation is designed as a mobile and flexible table-top workstation. The work area is accessible from three sides and can label a 120 mm x 120 mm area. A monitored safety door guarantees laser protection class 1 when the laser is in use. The integrated optical focus adjustment of +/- 7 mm and the manual support area height adjustment of up to 150 mm ensure equally high quality when labeling differently sized workpieces. The VectorMark compact 1 laser guarantees a permanent mark on the widest range of workpiece shapes and materials. The laser is easy to program and highly flexible. Use it to apply, for example, text, serial numbers, data matrix and bar codes, logos and drawings.

TRUMPF is one of the world's largest producers of fabricating machinery and a world market leader in lasers used for industrial production technology.
